

350 series ModuRocker chairs are attractive and engineered for daily use. Solid red oak side rails are bolted to internal steel components for durability. Wood components are finished with specially formulated, highly durable UV cured resin. This finish allows for cleaning with bleach-based agents to aid in the control of blood borne pathogens. Cushions are available in rotationally molded vinyl or textiles. Rotomolded vinyl is 200 mils or 250 mils thick and is fluid, pick and puncture resistant. It also can be cleaned with steam, mild detergents and bleach-based cleaners. All foam is pressure molded, two part, high resiliency flexible foam with an internal steel frame for bolt on attachment to frame. Unique motion mechanism bolts to frame and is fabricated with highly durable components to withstand constant rocking.

Sewn vinyl back with rotomolded seat

350-293

29.5"d x 24"w x 45"h | 19" seat ht
