

**450-11 Secure Seclusion Bed Pictured**

Moduform pressure molds a two part, high resiliency flexible foam that bonds to the interior skin of our seclusion bed while it cures. The exterior polyvinyl chloride surface is 200 mil thick, seamless and leather textured. No frames, no springs, no hard edges. This offers greater comfort, fluid and puncture resistance and the ability to clean with steam, mild detergents and bleach-based cleaners. This aids in the control of blood borne pathogens. The base is one-piece molded high-impact plastic and includes a full perimeter gasket to prevent fluid access. Available with and without restraint rings.
