Materials & Resources		Possible Points 14
Credit 4.1	Recycled Content, 10% (post consumer + ½ pre-consumer)	1
Credit 4.2	Recycled Content, 20% (post consumer + ½ pre-consumer)	1
<ol style="list-style-type: none"> CARTONING: Of the small amount of packaging used, 100% is recyclable, 90% of the paper used is from recycled paper with the remaining 10% from virgin fiber RECYCLED CONTENT: In 1995 ModuForm received the Governor’s “Gold Award” from the Commonwealth of Massachusetts for achieving 68% post-consumer recycled content in all packaging. METAL BED SPRINGS: ModuForm metal bed springs are comprised of almost 100% recycled materials. All re-rolled angle for head and side rails comes from recycled railroad tracks. Springs and clips come from scrap steel which is made into rods that are then drawn down into wire. Coil steel is processed steel scrap that is melted down and produced by mini mills such as Nucor. Even the paint process used (powder coating), is more environmentally friendly than liquid because of the liquid chemicals used and the disposal of liquid paint. The powder system is a closed loop system so unused powder is continuously reused. ROTATIONALLY MOLDED (520-SERIES): Contents of the chair considered to be from a recycled source would be 21.6 pounds or 18%. ABS base material typically contains 60-70% pre-consumer recycled material, recycled from actual processing (0% post-consumer). Base weighs 8 pounds, 5.6lbs considered pre-consumer recycled product. Particle board base is manufactured utilizing 100% post-industrial material. The base weighs 16 pounds. The finished chair weighs 120 pounds. FINISHING: 100% of run-off from rolled on flat-line finishing process is reclaimed, filtered and reused. SCRAP & SAW DUST COLLECTION & REUSE FOR ENERGY: ModuForm reuses or recycles all unfinished wood scraps. 		
Credit 5.1	REGIONAL MATERIALS, 20% MANUFACTURED REGIONALLY ModuForm manufactures in Fitchburg, MA	1
Credit 5.2	REGIONAL MATERIALS, 10% EXTRACTED AND MANUFACTURED REGIONALLY ModuForm manufactures in Fitchburg, MA. and Connelly Springs, NC ModuForm utilizes lumber from North American forests	1

north american hardwoods | from privately owned and managed renewable forests

soy based upholstery foam available | lower petro-chemical content

water based furniture and seating glues

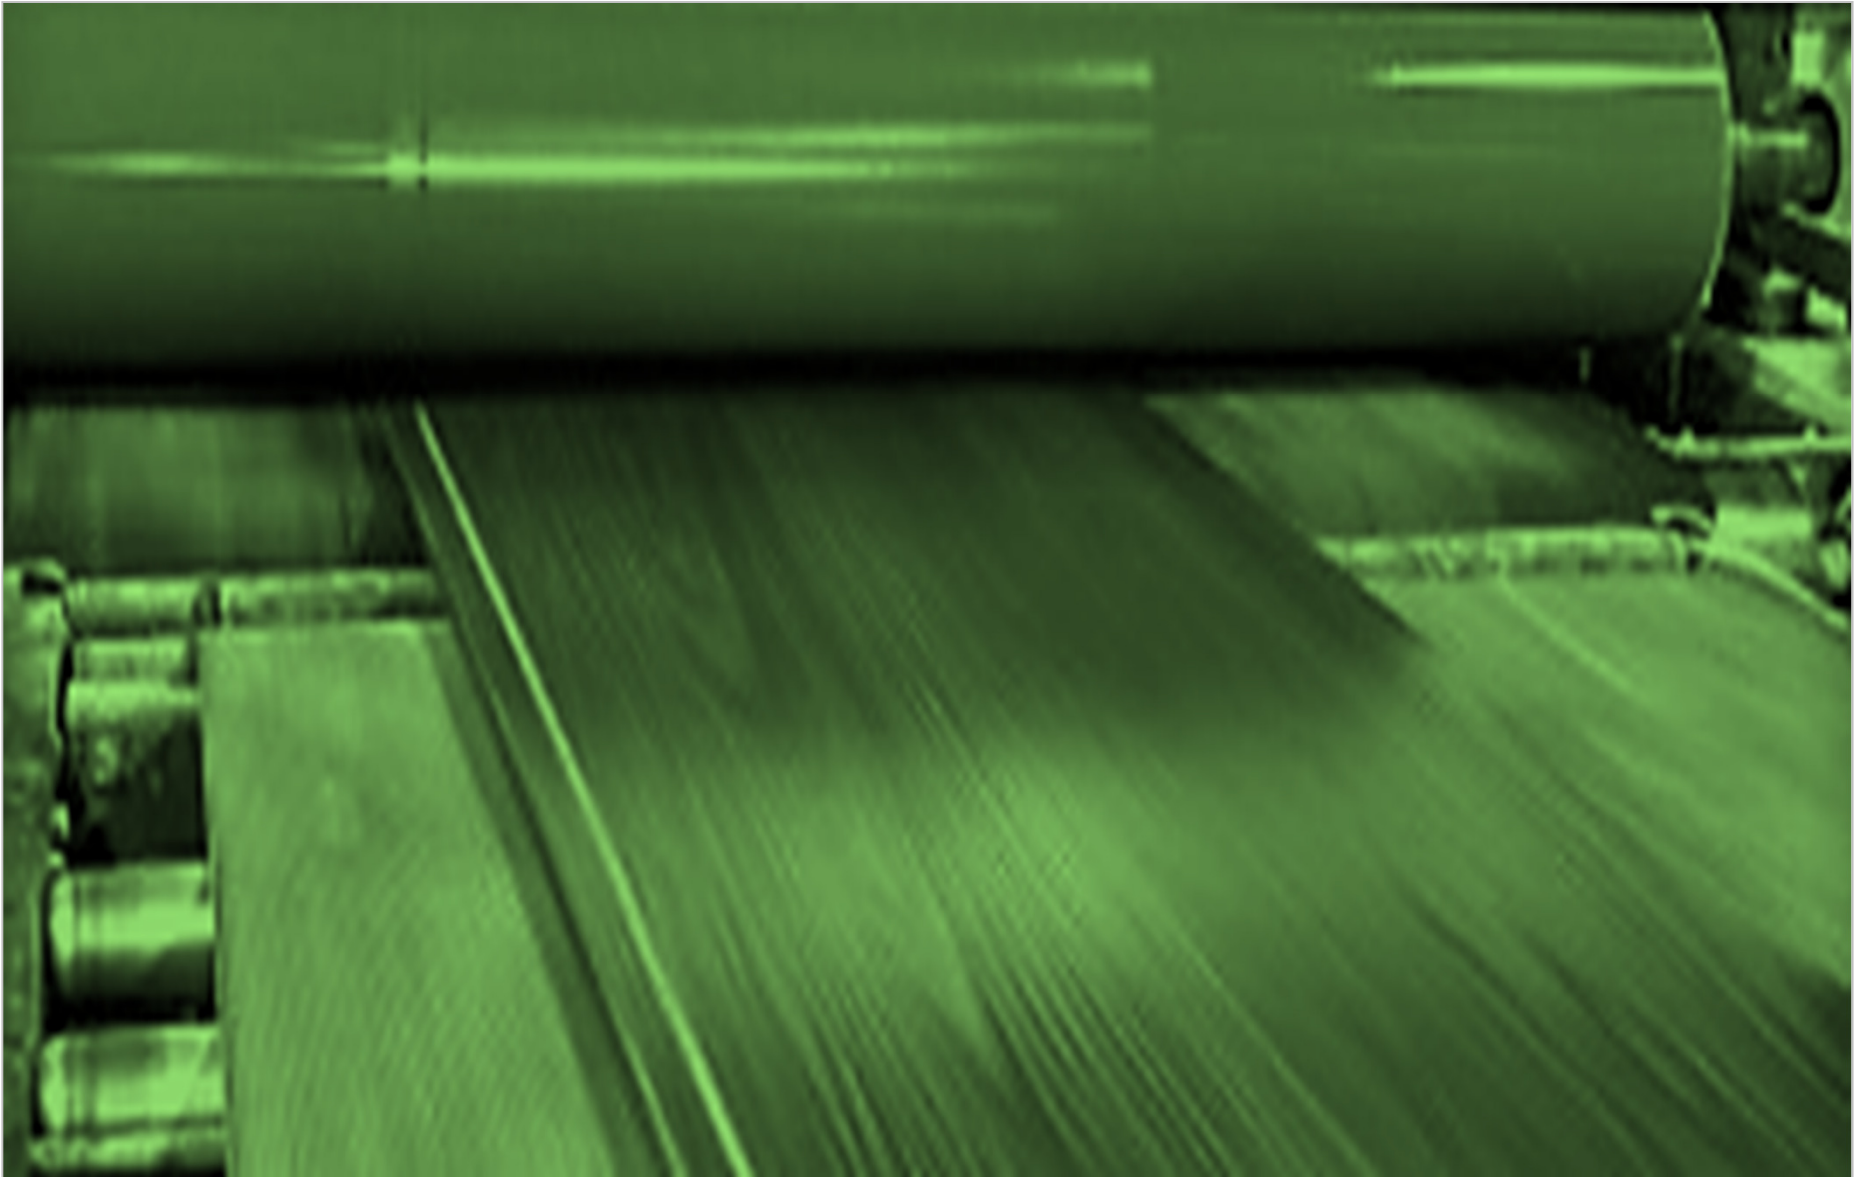

fabrics available in 100% recycled content

standard bed springs made from 100% recycled railroad tracks

installation of high efficiency led lighting in 2016 | on/off motion detection in warehouse since 2000

flat line roll coat finishing | 99.997% solids | emission free | zero volatile organic compounds

a portion of wood scrap and sawdust recycled into wood pellets

of the small amount of packaging used, 100% is recyclable, 90% of the paper used is from recycled paper with the remaining 10% from virgin fiber
