INTRODUCING OUR

Observation Support Recliner

The M100 Observation Support Recliner is designed for supervised behavioral health environments where comfort, visibility, and control must coexist. Developed using a risk-informed approach, it supports patient stabilization while maintaining clear sightlines, ease of inspection, and simplified cleaning—with no entrapment areas.

- Body-activated recline (no external handles or controls)
- One-piece molded polyethylene base—non-porous and fluid-resistant
- Stability-focused, low-profile, impact-resistant base
- Coated textile seating surfaces for comfort and cleanability
- Designed to support inspection and thorough cleaning
- Base geometry facilitates fluid management and effective sanitizing
- Open design minimizes concealment zones and eliminates entrapment areas
- Supports risk-assessed placement
